

ONC & NRCan Earthquake Early Warning Networks

- Homogenous GNSS and accelerometer equipment; with coordinated operations.

Localized Real-Time GNSS Processing (NRCan & ONC)

- 'Absolute' positioning with Precise Point Positioning (PPP)
- Freely available correction streams
- Position/coordinate streams (*rather than velocity*)
- Reasonably 'light-weight' in terms of processing requirements
- Permits onsite integration with other sensors
- Facilitates direct reporting of parametrized results (e.g., offsets) beyond continuous position streams
